THE REPLY FILED 10 March 2006 FAILS TO PLACE THIS APPLICATION IN CONDITION FOR ALLOWANCE.								
The reply was filed after a final rejection, but prior to or on the same day as filing a Notice of Appeal. To avoid abandonment of this application, applicant must timely file one of the following replies: (1) an amendment, affidavit, or other evidence, which places the application in condition for allowance; (2) a Notice of Appeal (with appeal fee) in compliance with 37 CFR 41.31; or (3) a Request for Continued Examination (RCE) in compliance with 37 CFR 1.114. The reply must be filed within one of the following time periods:								
a) The periods. The period for reply expires <u>3</u> months from the mailing date of the final rejection.								
b) The period for reply expires on: (1) the mailing date of this Advisory Action, or (2) the date set forth in the final rejection, whichever is later. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of the final rejection. Examiner Note: If box 1 is checked, check either box (a) or (b). ONLY CHECK BOX (b) WHEN THE FIRST REPLY WAS FILED WITHIN								
TWO MONTHS OF THE FINAL REJECTION. See MPEP 706.07(f).								
Extensions of time may be obtained under 37 CFR 1.136(a). The date on which the petition under 37 CFR 1.136(a) and the appropriate extension fee have been filed is the date for purposes of determining the period of extension and the corresponding amount of the fee. The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth in (b) above, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Continuation of 13. OtherApplicant argues that the carbon of Finkelshtain is not disclosed as being either amorphous or crystalline. The examiner disagrees since carbon is inherently either amorphous or crystalline and thus the carbon of Finkelshtain is inherently one or the other. Furthermore, Applicant has failed to show any clear support to show that the carbon of Finkelshtain is not either amorphous or crystalline and thus lacks sufficient evidence to overcome the prior art rejection of record. With respect to the arguments to the nitrogen density, as discussed in the previous office action the ratio of the nitrogen relative to the remaining constituents in the carrier as shown in Fig. 2a teaches of a nitrogen relative density within the claimed range, thus the nitrogen which is on a surface of the carrier between adjacent hydrocarbon rings is in fact a part of the surface of the carrier.

Applicant appears to have incorporated the allowable subject matter indicated in the previous office action into independent form and cancelled the corresponding dependent claims. Thus claims 26-28 are allowed for reasons set forth in the previous office action.
